

# Pros and Cons Of The Apple iPad

See what's good and what's bad on the  
Apple iPad.

# Good vs Evil

## Pros

- Large size
- More screen-size than iPhone
- Good size (not too big or small)
- Best mobile experience for web, games, email, etc
  - Excellent battery life
- Support for "HD" apps & iPhone apps
  - Light
  - High build quality

## Cons

- No flash/Java/shock-wave support (poor support reasons/battery life/stability/security)
- Not cheap (Starts @ \$500)
  - No camera or video

# Verdict (Should I Get It?)

Overall you should get the Apple iPad. It's sold out pretty much everywhere due to extremely large demand. Sure it has no flash support but outside windows Adobe doesn't make flash run every well.

It's better then a netbook because the screen does not feel cramped, and the UI is designed for a small device.

It's better in most cases then a laptop if you are mobile alot because of how lightweight it is, and its 10+ hour battery life.
